

EVERLAM invests in innovative PVB interlayer solutions for the laminated architectural glazing market

In February 2015, EVERLAM took over the European Butacite® Polyvinyl Butyral (PVB) interlayer operations of DuPont, set in Germany, and started doing business as an independent entity.

Building on the product's 30 years' heritage and reputation for high quality, the new company has invested massively to extend its range of PVB film, now branded EVERLAM™.

Our global organisation serves glass laminators and manufacturers producing architectural laminated safety glass around the world.

The EVERLAM Center of Competence in Belgium

Our Center of Competence hosts our commercial headquarters, R&D laboratory and technical center. Bringing together in one place the company's experts in all disciplines, it creates strong synergies across functions to propose innovative solutions to customers.

30 years of world class production in Germany

Our PVB sheet extrusion products have been manufactured for 30 years in our ISO 9001-certified plant in Germany, with an unwavering record of delivering products of absolute quality and consistency over that time. This sustained performance is your best guarantee that EVERLAM has the necessary know-how.

Our technical know-how is second to none

Processing PVB film can be a very sensitive operation. Our in-house experts test the properties of customers' laminated products, help them work out how to improve their laminated glass products and production, fix many issues and find creative solutions.

A drive for service excellence and strong partnership

Service excellence is a true commitment. Our people are trained to provide the best sales and technical support, quick response time and on-time product delivery. Empowered to make decisions, they go out of their way to solve challenges efficiently. Collaborating with our customers is what makes a successful partnership.

EVERLAM™ CLEAR PVB interlayer

Our PVB film is elastic, adhesive, strong and durable. It gives laminated glass its basic properties of safety and security, noise control and ultra-violet (UV) protection.

OUR SPECIALTY SOLUTIONS

EVERLAM™ COLORED PVB interlayer

Our range of mineral color nuances includes white, blue, green, bronze and grey colors. A perfect fit for elegant and distinctive buildings design, our colored PVB films are an inspiration for demanding architects and designers.

EVERLAM™ WHITE

It is used in applications where both light and privacy are needed. Suitable for interior doors and windows, meeting rooms or balconies, it helps create fully-private or semi-private areas while allowing in a maximum of natural light.

EVERLAM™ QUIET

A performing sound blocking solution that combines a high-performance three-layer PVB film that can be laminated in single or multiple glass configurations. While bringing extra sound insulation and comfort, it minimises the weight of the glass structure around it.

EVERLAM™ SUPER TOUGH

An extra resistant PVB film, it provides extra strength and safety in applications where safety can never be traded, such as glass balconies, balustrades, curtain walls, floors and stairs.

EVERLAM™ COOL

A new generation of high-performance PVB film, it uses nanoparticles technology, which uniquely combines an excellent protection against infra-red radiation, with the additional advantage of allowing light in while preserving natural colors.

**SMALL ENOUGH TO CARE,
LARGE ENOUGH TO DELIVER.**

We continue to invest to be the most valued PVB film supplier to safety glass laminators around the world.
